

# AED Cabinet Specifications

- The measurements provided below are approximate and subject to change without notice.
- Read the "AED Cabinet Installation and Operation Guide" provided with your cabinet prior to installation.
- Check and re-check measurements before cutting holes in walls for recessed cabinets.
- Rough wall opening measurement is the cabinet size. Wall opening will be slightly larger.
- Cabinets equipped with an optional strobe light add approximately 3" to the height.

\*ZOLL standard and tall metal cabinets include a bracket which reduces depth by up to 1.5".

- Cabinets protect the AED while making it highly visible to potential rescuers.
- Most indoor cabinets are available in powder coated steel. Many are available in stainless steel. Outdoor cabinets are fiberglass.
- AED cabinets are non-locking, allowing quick access to the AED in the event of an emergency.
- Cabinets are available with or without audible alarms and strobe lights. Built-in strobe lights are available for flush mount cabinets equipped with an audible alarm. Satellite strobe lights are available for recessed and semi-recessed mount cabinets equipped with an audible alarm.
- A strobe light is an excellent indicator an alarm is present and a deterrent to tampering. In loud environments, such as manufacturing facilities, it provides a highly visible alert where the audible alarm could go unnoticed.
- A 9V battery provides power for the audible alarm and strobe light. No external A/C power hookup is required. Batteries are supplied with alarms on all cabinets with the exception of Philips brand cabinets.
- Cabinets equipped with an alarm have an “on-off” switch on the cabinet and on the alarm unit.
- Compact cabinets from Allied Medical Products are ideal for these AEDs: Philips Home/OnSite, Philips FR2/FR2+, Philips FRx, Physio-Control CR Plus, and Heartsine PAD.
- Tall style cabinets from Allied Medical Products allow you to add either a small oxygen cylinder or a first aid kit.
